Open to relocation / remote

SUMMARY

Frontend Engineer with 4 years of experience building React and TypeScript applications across fintech, healthtech, logistics, real estate, and event operations. Experienced in monorepo architecture, shared component libraries, type-safe API contracts, and role-based platforms, with recent delivery inside Power Apps and Dynamics 365 environments. Comfortable owning frontend delivery end to end, from architecture decisions through production deployment, on teams of up to 12 and as sole engineer.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML5, CSS3

Frameworks & Libraries: React, Next.js (App Router), Tailwind CSS, Material UI, Mantine, Base UI

State & Data: TanStack Query, Zustand, Redux, SWR, React Hook Form, Zod, Formik, Axios

API & Type Safety: openapi-ts, openapi-fetch, openapi-react-query, Orval, REST, WebSockets

Testing & Monitoring: Vitest, Playwright, Sentry

Microsoft Stack: Power Apps, Dynamics 365, Dataverse, FetchXML, Azure, Azure DevOps

Architecture & Tooling: Turborepo, npm workspaces, Vite, Docker, Google Cloud (Artifact Registry), Git, GitHub, Bitbucket

Data Visualisation: Recharts, ApexCharts, Chart.js, Syncfusion

WORK EXPERIENCE

Accede Ghana Limited — Accra, Ghana

Aug 2022 - Present

Frontend Engineer

- Frontend engineer on the JavaScript team, delivering 8+ client products across fintech, healthtech, logistics, real estate, and enterprise domains; from mobile-first consumer platforms to workflow-heavy internal dashboards.
- Own frontend architecture decisions on client engagements, including framework and tooling selection, type-safe API contract design with OpenAPI, and component structure intended to survive handover and long-term maintenance.
- Expanded delivery capability into the Microsoft ecosystem, building React applications that integrate with Dataverse inside Power Apps and Dynamics 365 environments.
- Identify UX gaps, edge cases, and QA risks during design review rather than after implementation and serve as primary QA liaison, triaging bug reports, coordinating fixes across frontend and backend, and owning release verification.
- Mentored a frontend engineering intern (Feb - Apr 2026) from HTML/CSS fundamentals to independent React delivery, designing a 3-month learning roadmap covering JavaScript, TypeScript, and React, and guiding daily practice through CodeWars and Frontend Mentor challenges; the intern's capstone, a movie browsing app with search, filtering, and streaming built against a third-party API, earned praise from leadership and a strong recommendation for rehire.

Selected Client Projects:

Sales Analytics Dashboard — Dynamics 365 / Power Apps

Jul 2026

React, TypeScript, Dynamics 365, Dataverse, FetchXML, Power Apps

- Delivered a client-facing analytics proof of concept end to end as sole engineer in one week, from design iteration through deployment into a live Dynamics 365 environment; the proposal won the client account, with the team now retained as their primary product team.
- Chose to build in React and deploy compiled output as a Dynamics web resource rather than the platform-default HTML/CSS/JS approach, trading a small integration cost for a componentised, maintainable codebase.
- Built the Dataverse data layer using FetchXML, mapping entity relationships and shaping query results to feed pipeline, revenue, and volume visualisations across 4 dashboard views.
- Designed 7 KPI metrics and 9 chart components (funnel breakdowns, regional revenue, monthly trends) with light/dark theming and Excel export, matching Dynamics 365 native UI conventions.

Piver — Global Freight Logistics Platform

Jan - Sept 2025

Next.js, TypeScript, React Query, openapi-ts, GSAP, Lingui, Vitest, Azure DevOps

- Built the marketing site's landing page, including a scroll-driven hero sequence where a hidden video slides in from off-screen, docks to center, expands to fill the viewport, and begins playback, synchronised to page scroll position and rebuilt across multiple iterations to hold up responsively.
- Owned the freight forwarder dashboard in a role-based platform: consignment discovery from the marketplace (weight, specs, supporting documents), quote creation, shipment tracking updates, and full CRUD on quotations and shipments with search and filtering, across 40+ screens.
- Worked with Stripe-backed payment and card management views, account settings, and password recovery flows for forwarders, plus platform-admin tooling for role assignment and user CRUD. Gained hands-on experience with openapi-ts for type-safe API contracts and implemented app-wide internationalisation using Lingui.

Trybz — Estate Management Platform

Feb 2023 - Sept 2024

React, Zustand, JavaScript, Axios, Tailwind CSS, WYSIWYG Editor, PayPal (integration)

- Owned end-to-end estate manager workflows across a 40+ screen application including visitor approval and tracking (resident, unit, purpose, and duration of stay), unit-based billing, and access-tag issuance for sanitary and maintenance staff, as one of 3 frontend engineers within a 12-person delivery team.
- Built platform and system admin tooling for user and role management, including an email-invitation onboarding flow with registration and role-based access control, and a custom WYSIWYG editor for resident notifications and email communiques.
- Developed invoice template selection and customization flows and billing automation UI on top of a PayPal-based payment integration.
- Implemented an administrator impersonation feature letting admins view the platform through a specific user's session, restricted from destructive actions, to reproduce and debug reported issues without needing live access to a customer's account.

Love Notes Around The World — American Cancer Society

Oct 2022 - Dec 2023

React, Redux, Material UI, Tailwind CSS, Fabric.js, Syncfusion, Sentry

- Built authentication, onboarding, and account management for a volunteer platform enabling supporters to create and send messages of encouragement to cancer patients, caregivers, and care providers.
- Integrated 40+ API endpoints and implemented a tiered subscription and payment flow supporting the organisation's fundraising model.
- Developed a Fabric.js canvas editor letting users compose custom note cards with text and clip art over background images, and an in-app shop for fundraising merchandise.
- Instrumented the frontend with Sentry for error monitoring, improving visibility into production issues across a 6-person delivery team.

Kacha — Fintech Platform (Ethiopian Market)

Aug 2022 - Mar 2023

React, Next.js, TypeScript, Redux, Axios, Tailwind CSS, Firebase, React Query

- Built the customer-facing financial suite: secure login, OTP verification, password recovery, money transfers, bill payments, airtime, vouchers, and remittances, alongside the full marketing site (home, services, about, contact, FAQs), maintaining a consistent layout system across every transaction flow.
- Delivered admin and merchant/branch-manager tooling for user onboarding, role assignment, transaction reversal, live transaction monitoring, and reporting dashboards.
- Shipped 22+ UI screens and 15+ API endpoints within one month as part of a 6-person delivery team, under a compressed launch timeline.

KudiGo Limited — Accra, Ghana

May - Aug 2021

Product Manager Intern

- Supervised a testing team of 18 employees and customers across 8 new web and mobile application features.
- Managed a team of 3 engineers building a WhatsApp shopping-assistant chatbot, achieving a 4.5-star rating from 96.7% of users in experience testing.

FREELANCE & INDEPENDENT PROJECTS

NCD Church Event Platform — Sole Frontend Engineer

Jun - Dec 2024 | Jul 2026 - Present

React, Next.js, TypeScript, Vite, TanStack Query, openapi-ts, Zustand, Formik, Material UI, Docker, Google Cloud

- Sole engineer on a three-application platform for church event operations: a multi-step participant registration app, a QR scanning app for facility and meal access control, and an administrative app for event setup, worker assignment, and reporting.

- Built participant registration with country-specific phone formatting, dynamic forms by participant type, and bulk family-member entry; implemented admin workflows for event publishing, room allocation, meal-station setup, and transportation manifests.
- Designed a QR scanning workflow with real-time alerts for check-in and meal-access validation, and role-based analytics dashboards using configuration-driven rendering to serve multiple user types without duplicating UI logic.
- Re-engaged in 2026 to modernise the platform: migrated the admin application from Vite to Next.js (App Router) and JavaScript to TypeScript, replacing hand-maintained lazy-loaded routing with per-route code splitting across 60+ routes and eliminating a 1.4 MB monolithic entry bundle flagged by build-time chunk warnings.
- Rebuilt the data layer around end-to-end typed API contracts (openapi-ts, openapi-fetch, TanStack Query), replacing Orval, Axios, and SWR; containerised builds with Docker and published versioned images to Google Artifact Registry for client testing across dev and production.

Inventory Masters (IMS) — Frontend Engineer

Jul 2026 - Present

Next.js 16, React 19, TypeScript, Turborepo, Tailwind CSS v4, Base UI, TanStack Query, openapi-ts, React Hook Form, Zod, Recharts, Docker

- Building a six-application Turborepo monorepo for a multi-tenant inventory and commerce platform: authentication entry point, super-admin, enterprise, merchant, merchant POS, and customer storefront, as one of two frontend engineers on a 7-person team.
- Architected four shared workspace packages (UI component library, auth, config, and a generated OpenAPI client) consumed across all six apps, plus a design-token layer driving Tailwind v4 utilities so no component hardcodes a colour value.
- Built nine role-based dashboard views composed from four reusable archetypes and established a data-seam pattern where views never fetch directly. Each screen's data enters through a single hook, so connecting a live endpoint is a one-file change.
- Identified and resolved gaps in incomplete design specs: missing detail-page frames, contradictory currency and column definitions across mockups, and endpoints returning incorrect data, proposing and documenting solutions with designers and backend engineers rather than blocking delivery.
- Delivered authentication flows, a responsive marketing site, and a complete e-commerce storefront UI; currently integrating live APIs through type-safe generated contracts (openapi-fetch, openapi-react-query).

MC Marine Services — Sole Engineer

Nov 2025

React, TypeScript, Vite, Intersection Observer API, WebP, Hostinger

- Delivered a responsive marketing site end to end for a Ghana-based marine and cargo surveying company, owning architecture, implementation, deployment, custom domain configuration, and contact form email delivery integration so client enquiries reached the business directly.
- Took an AI-generated React codebase as a starting point and refactored it for production, removing unused dependencies, updating outdated packages, and restructuring the component hierarchy into a leaner, maintainable base that could absorb client feedback.
- Optimised delivery with lazy loading, WebP conversion, Intersection Observer-driven rendering, async image decoding, and code splitting, and migrated media assets to hosted storage to reduce initial payload.

COMMUNITY & MENTORSHIP

StartersTech — Tema, Ghana

Jan - Jun 2022

Facilitator Supervisor & STEM Course Moderator

- Oversaw 4 facilitators teaching robotics, programming, and engineering concepts to children; led weekly reviews to improve teaching materials and student engagement.

Campaign for Female Education — Tema, Ghana

Aug - Oct 2018

Mentor

- Mentored 120 junior high school students on career pathways and secondary school preparation; feedback reported an 83% increase in motivation and impact.

EDUCATION

Ashesi University — Berekuso, Eastern Region, Ghana

Sept 2018 - June 2022

Bachelor of Science, Management Information Systems

CERTIFICATIONS

[Meta Front-End Developer — Meta / Coursera](#)

[Microsoft Certified: Azure Developer Associate \(AZ-204\) — Microsoft](#)
